

Second Breakfast

Jack Vogt
Chloe Bradley
Krushil Naik
Lynda Foster

Scope

DevOps & Microservices

Jenkins

Terraform

Docker / ECS

Kubernetes / EKS

Collaboration & Project Management

GitLab

Jira

Confluence

Project Overview

Aline Financial Online Banking Application

Technologies & Tools

ANSIBLE

Amazon EKS

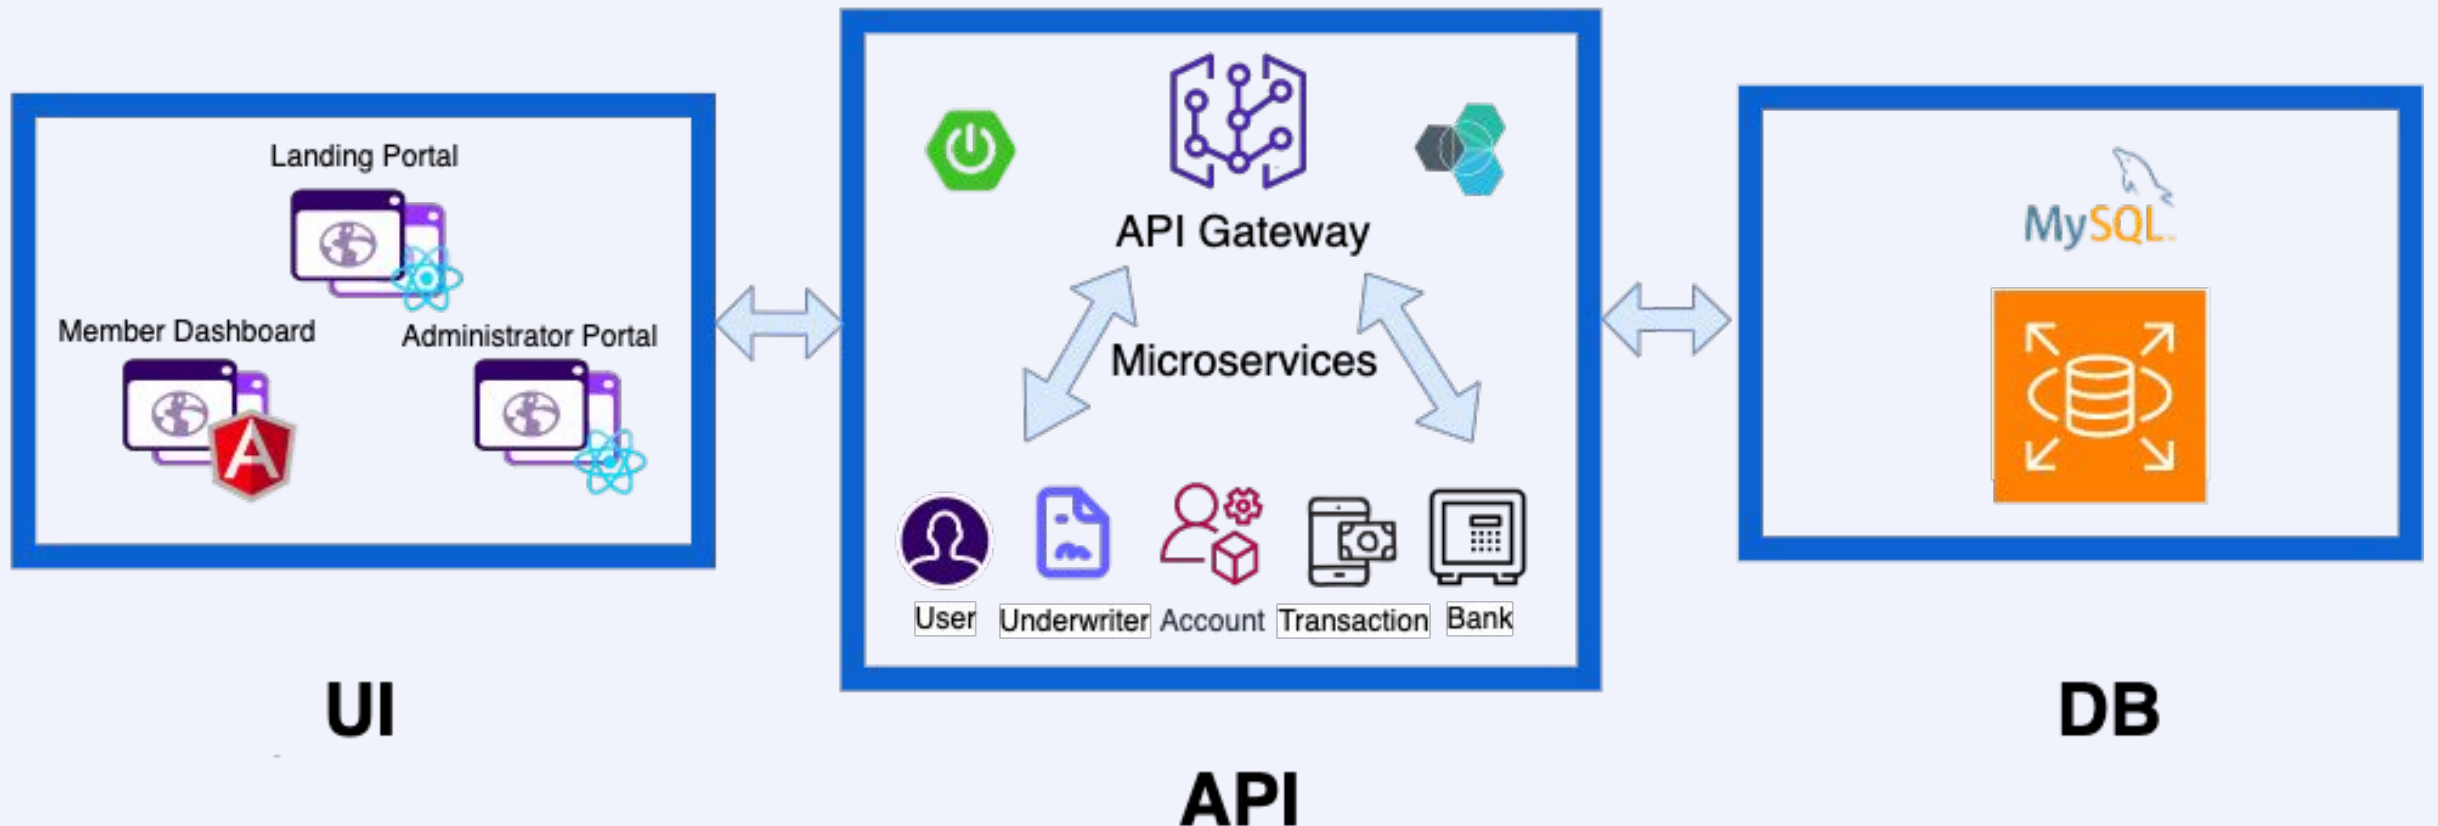

Amazon RDS

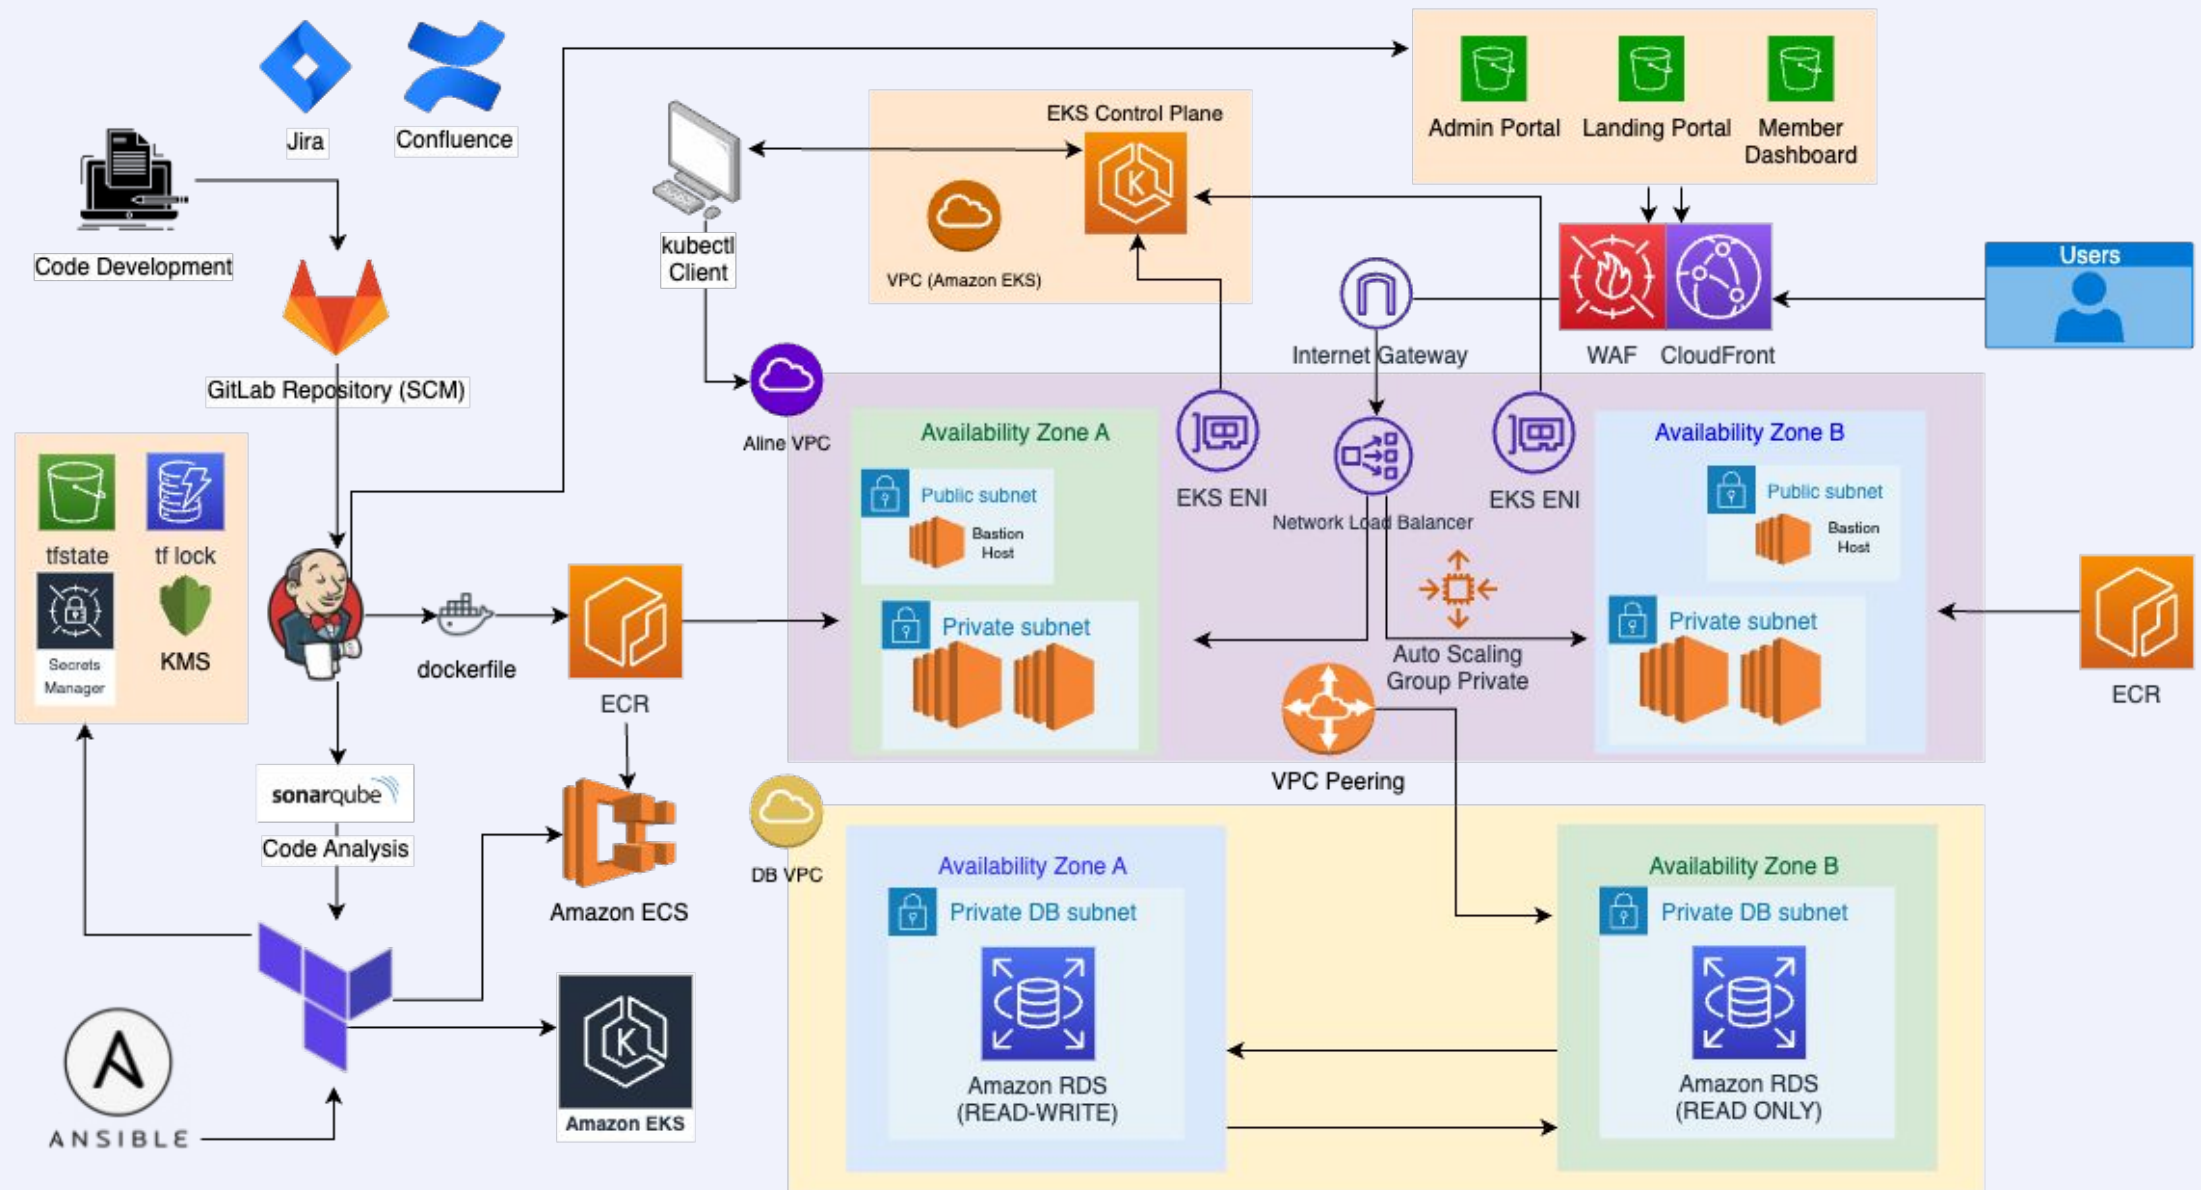

Amazon ECR

Microservice Architecture

Aline Financial

Cloud Architecture

Presentation Overview

- ▶ Jenkins (Jack)
 - ▶ Automate testing, build, and deployment
- ▶ Docker / ECS (Chloe)
 - ▶ Deploy containerized services to AWS
- ▶ EKS (Krushil)
 - ▶ Establish automated scaling/updates across availability zones
- ▶ Terraform (Lynda)
 - ▶ Manage, provision, and deploy infrastructure resources

**Jack
Vogt**

Responsibilities

- ▶ CI/CD
 - ▶ Set up Jenkins Pipelines
 - ▶ Integrate with Sonarqube
- ▶ Containerization
 - ▶ Build Docker images for each microservice (Stored in ECR)
- ▶ Container Orchestration in Cloud
 - ▶ EKS
 - ▶ ECS
- ▶ Infrastructure as Code
 - ▶ Use Terraform to provision AWS resources (allows for versioning & automatability)

**Jack
Vogt**

Responsibilities

- ▶ CI/CD
 - ▶ Set up Jenkins Pipelines
 - ▶ Integrate with Sonarqube
- ▶ Containerization
 - ▶ Build Docker images for each microservice (Stored in ECR)
- ▶ Container Orchestration
 - ▶ EKS
 - ▶ ECS
- ▶ Infrastructure as Code
 - ▶ Use Terraform to provision AWS resources (allows for versioning & automatability)

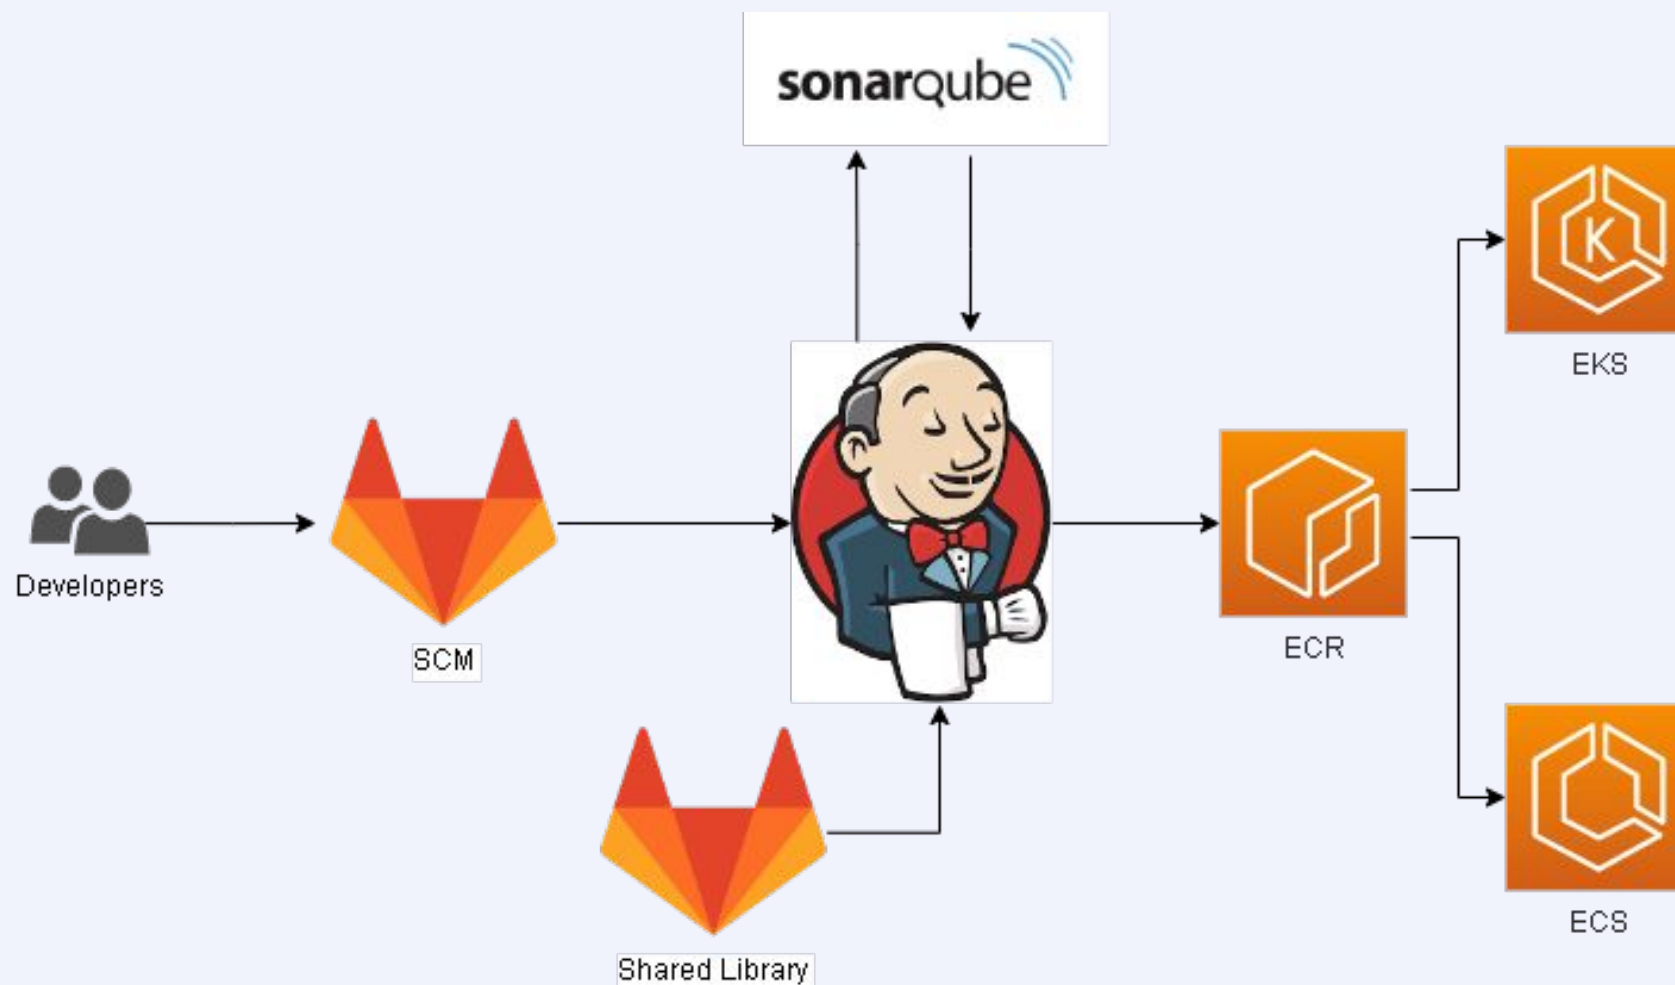

**Jack
Vogt**

Use Case

- ▶ Automation
 - ▶ Increase consistency and reduce human error
- ▶ Ease of use for Developers
 - ▶ Create seamless process for integrating and deploying changes
- ▶ Establish Code Quality Standards
 - ▶ Analyze code to prevent suboptimal code being used in production
- ▶ Create Rollback strategy
 - ▶ Allow for rollback to specific deployment

CI/CD Flow

Questions?

Thank You!

Chloe Bradley

Responsibilities

- ▶ Jenkins
 - ▶ Build images, Sonarqube analysis, deploy to ECS/EKS
- ▶ Kubernetes / EKS
 - ▶ Deploy microservices and frontends
- ▶ AWS
 - ▶ Manage resources, especially using terraform
- ▶ ECS

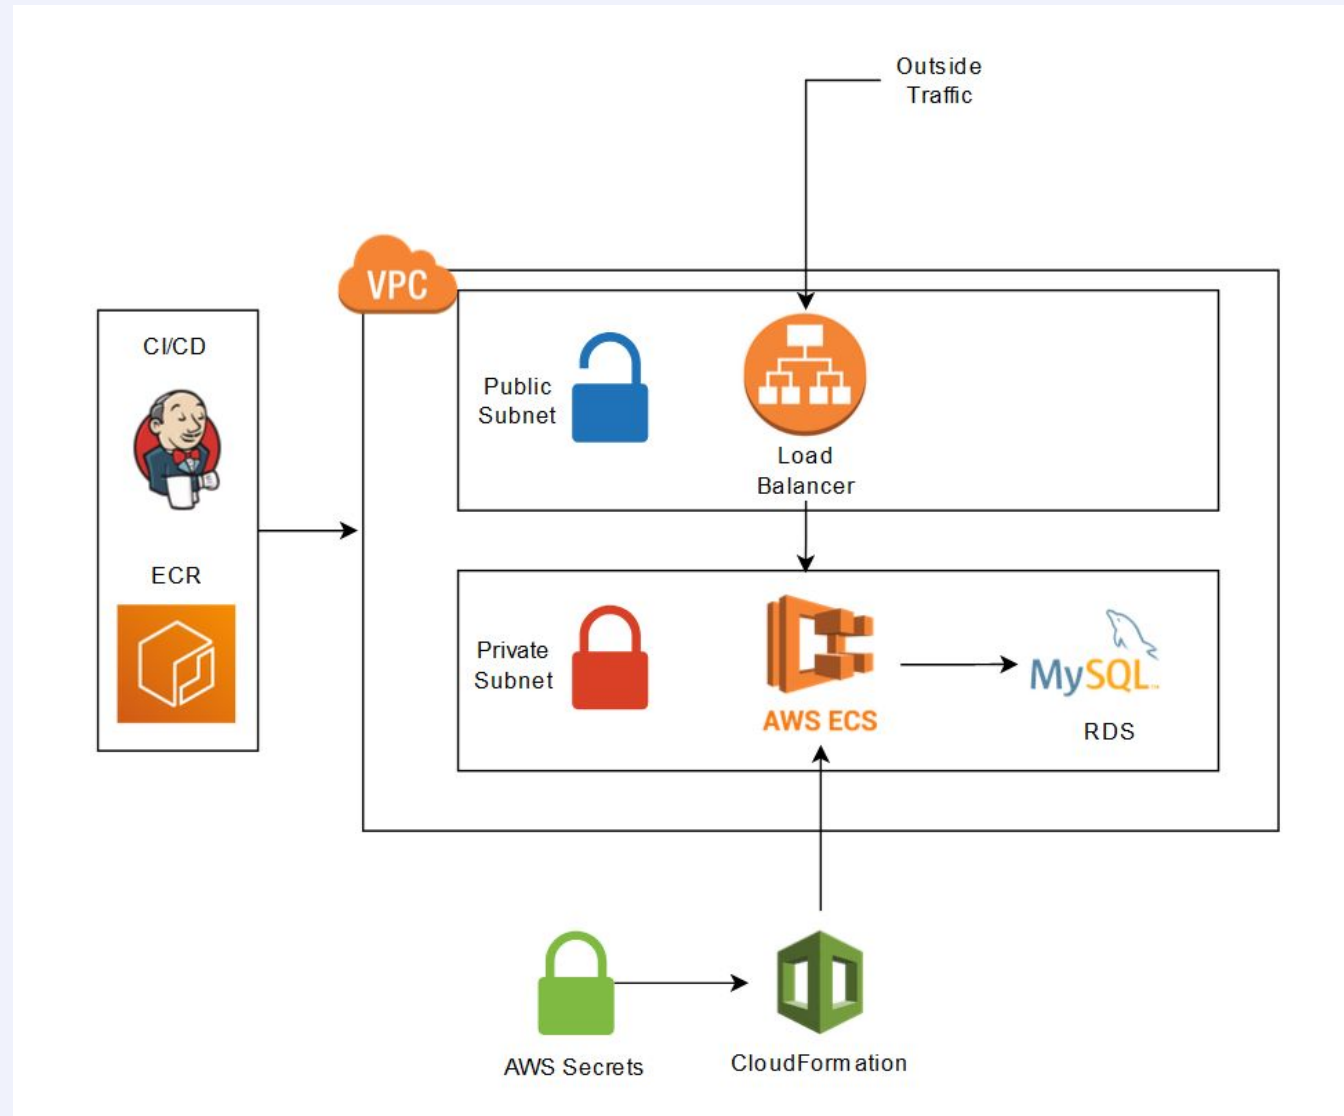

Chloe Bradley

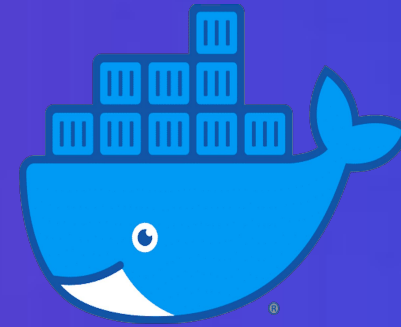

Use Case

- ▶ You need a scalable service
 - ▶ Similar idea to Kubernetes
 - ▶ Appropriate for smaller scale microservice applications
- ▶ Integrated with Docker Compose
 - ▶ Simpler than deploying with Kubernetes
- ▶ Strong security baked in
 - ▶ Can have multiple IAM roles assigned depending on needs
- ▶ Deeply integrated with AWS
 - ▶ ECS is proprietary

Solution

 smoothstack

Questions?

Thank You!

Krushil Naik

Responsibilities

- ▶ **Containerization**
 - ▶ Build and optimize Docker images
- ▶ **Jenkins**
 - ▶ Scheduled to run during business hours only with AWS Lambda and EventBridge
 - ▶ Shared library usage for DRYness
- ▶ **Orchestration**
 - ▶ ECS and EKS
- ▶ **AWS Provisioning**
 - ▶ Terraform

Specialization - EKS

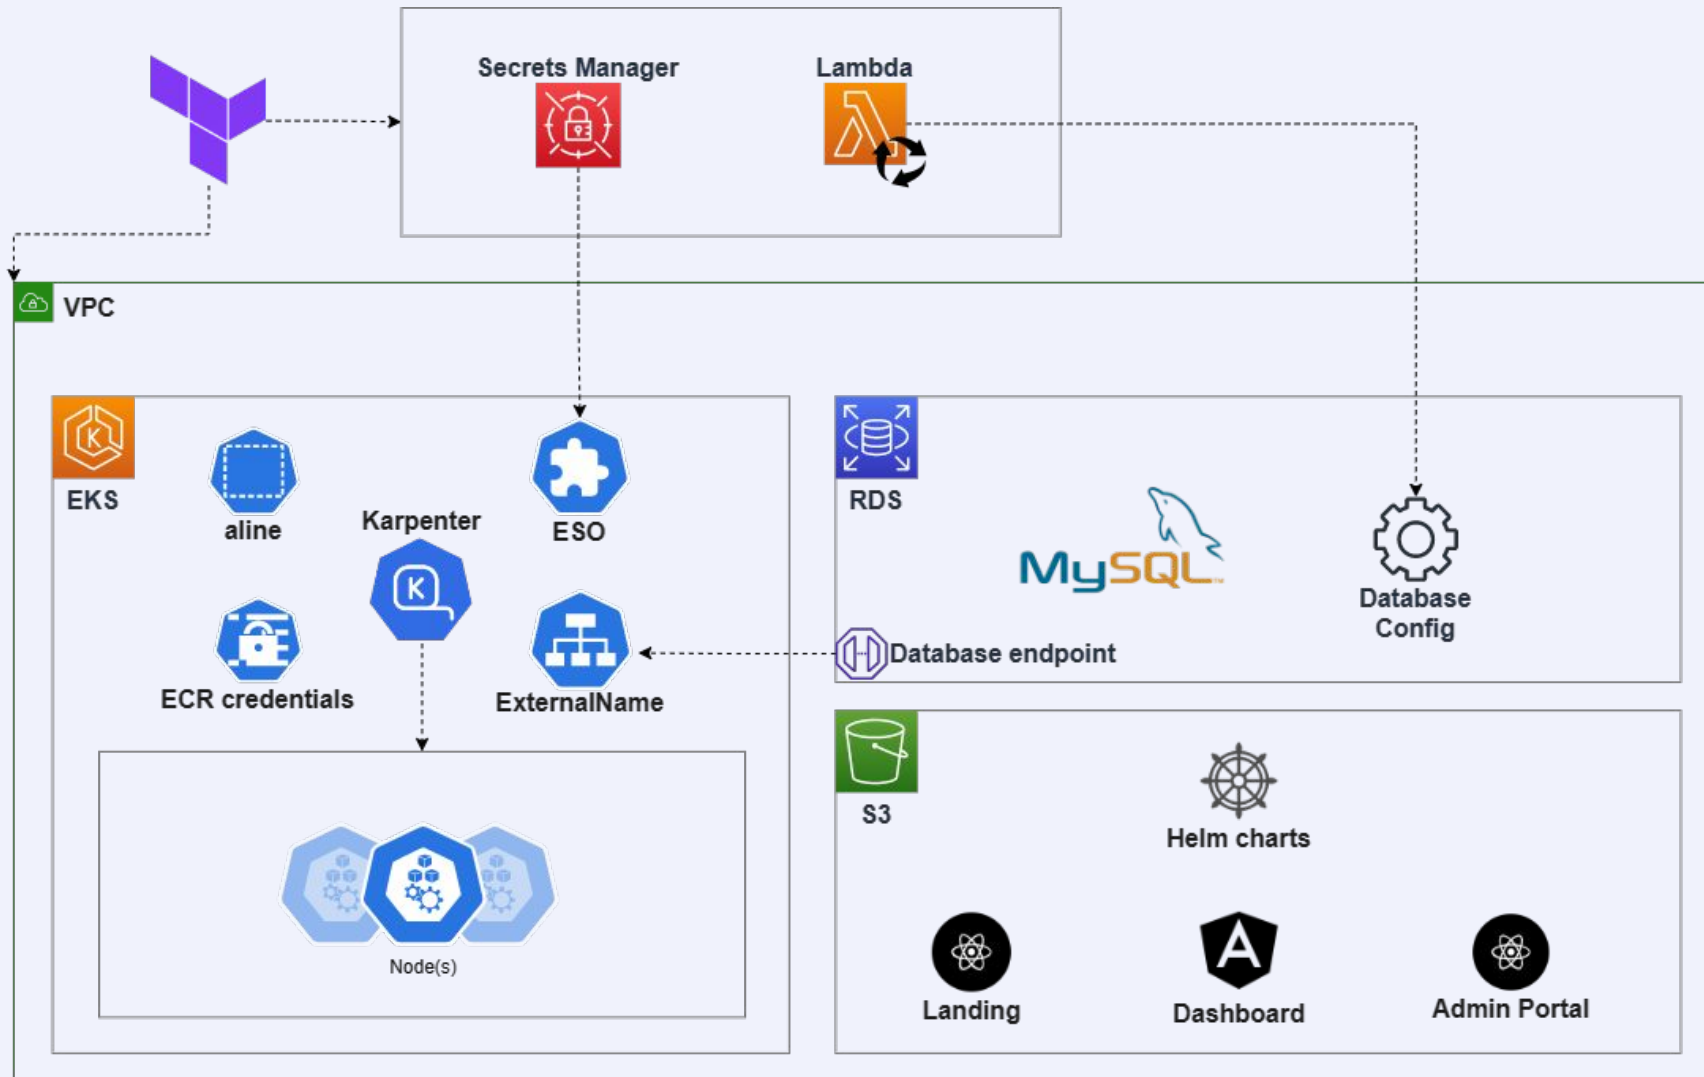

Krushil Naik

Use Case

- ▶ Platform agnostic way to deploy your app
- ▶ Rich community support and documentation
- ▶ Automatic maintenance of microservices

Solution (infrastructure)

Questions?

Lynda Foster

Responsibilities

- ▶ **Jenkins**
 - ▶ Configured and deployed the team's Jenkins instance with distributed architecture
- ▶ **Containerization**
 - ▶ Optimized container images to improve resource utilization and increase security
- ▶ **Orchestration**
 - ▶ Orchestrate containers and deploy services to ECS and EKS
- ▶ **Terraform**
 - ▶ Manage and provision infrastructure resources to ensure consistency and make scaling predictable
- ▶ **Ansible / CloudFormation**
 - ▶ Automate infrastructure management and configuration

Lynda Foster

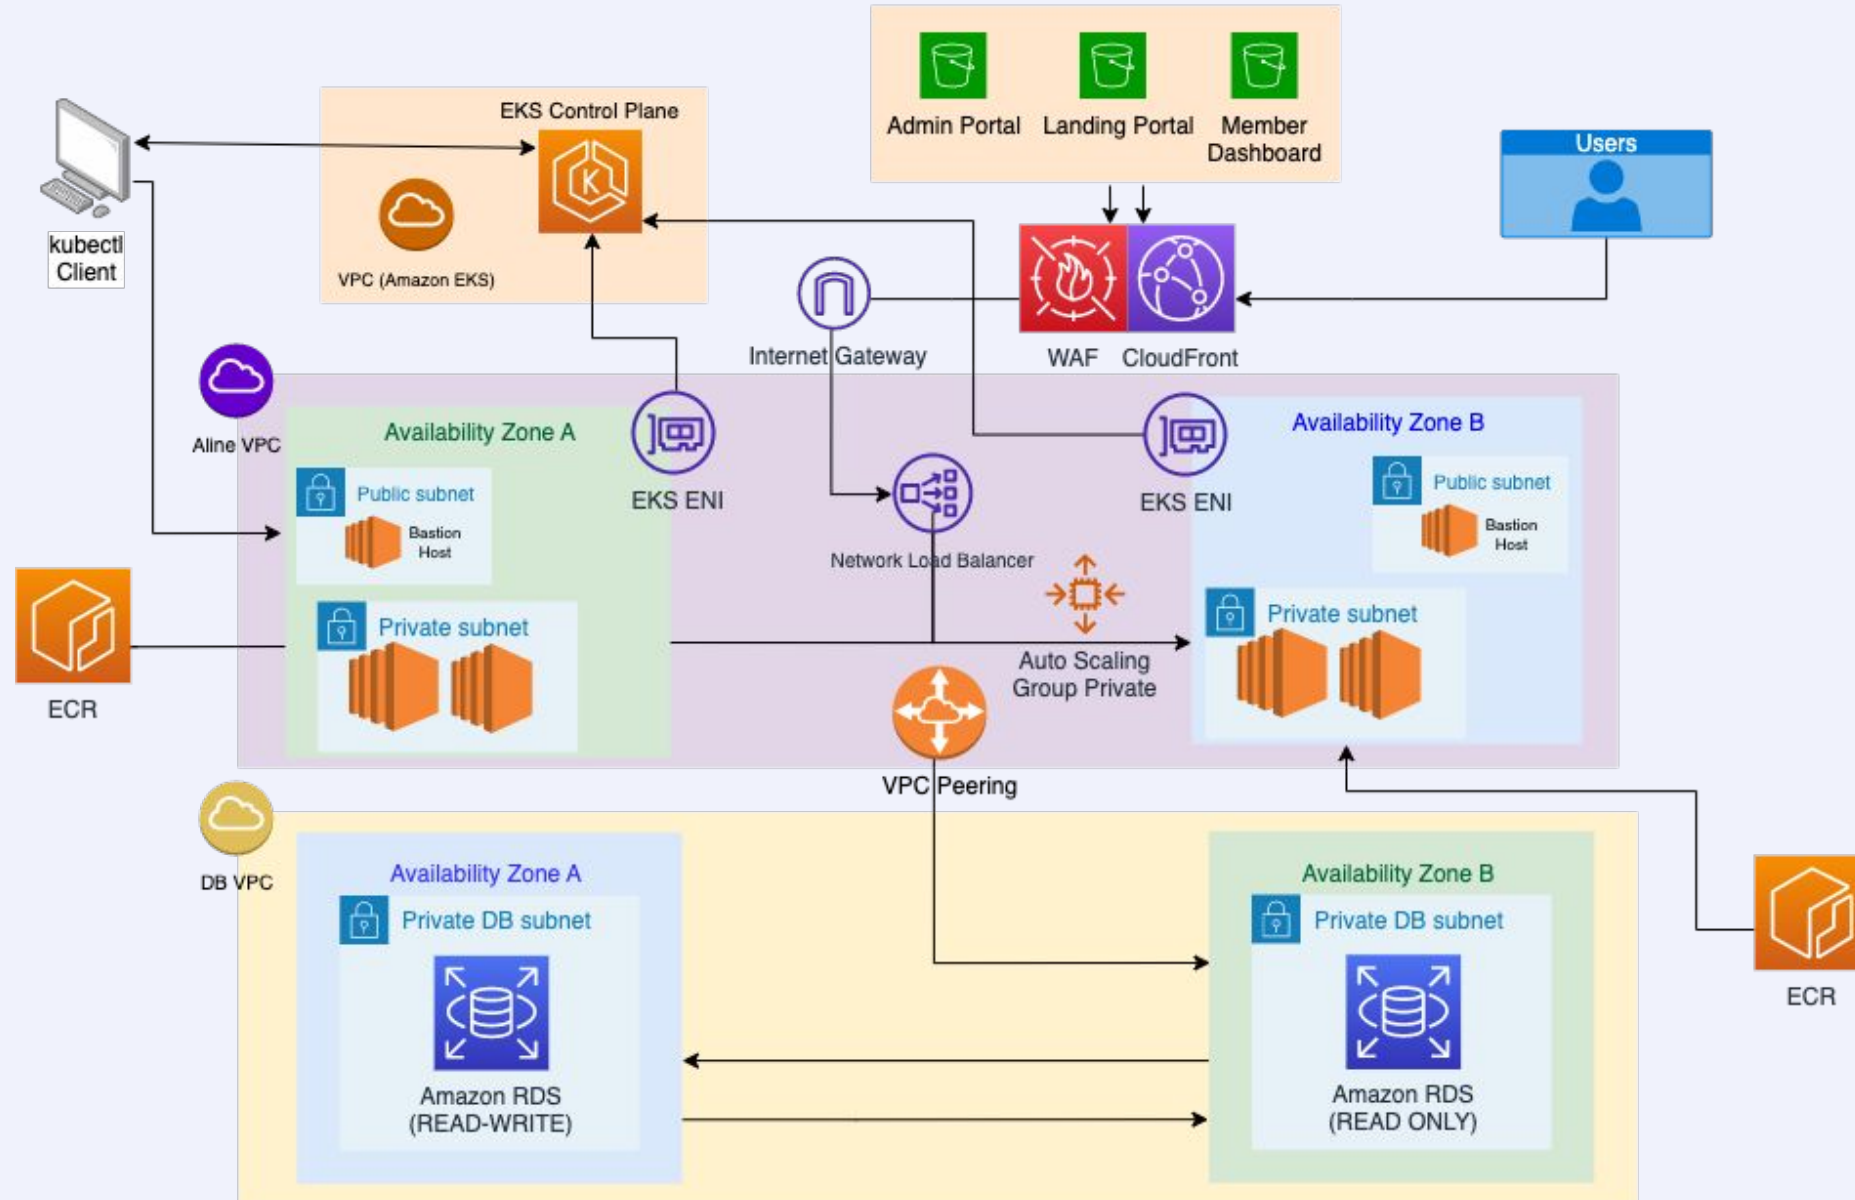

Use Case

Security – automate security practices and ensure compliance with industry regulations

Stability – will only make changes if it needs to, versioning to allow rollbacks

Scalability – manages dependencies across architecture tiers

EKS Provisioning
